Static vs dynamic

Readiness analysis

Structured data analysis

Static vs dynamic ⓘ

Your content is mostly static.
Amazing, most of your content is not dynamic and readable by LLM Crawlers.

Readiness analysis ⓘ

An overview of how well your content is prepared for AI Search.

Category	Score
▲ Acronyms and Terminology	60%
Several terms are used without explicit definition: "GEO" (assumed geographic SEO), "IA" (common but should expand to "intelligence artificielle" on first use), and tools like "ChatGPT" and "Perplexity" are named without context. Recommend: add a one-line glossary or parenthetical first-use definitions (e.g., "GEO (optimisation pour les réponses locales des IA)").	
▲ Semantic Repetition	75%
The core message (customers ask AIs; competitors are cited; you must appear) is repeated effectively across sections which reinforces the point. However some phrases repeat almost verbatim (two near-identical examples about "Un prospect demande à ChatGPT..."), which feels redundant rather than reinforcing. Suggest varying phrasing ("clients demandant", "utilisateurs posent la question", "les IA citent vos concurrents") and add a single illustrative example instead of duplicates.	
▲ Jargon and Metaphors	70%
Some jargon and metaphors appear: "GEO" (undefined), "boîte noire", "tunnel figé", "prompts", "source que les IA reprennent". These are mostly useful but could be simplified—for example replace "boîte noire" with "processus fermé" or "opaque", and add a plain-language definition for "prompts" ("phrases que l'on envoie à une IA"). Also remove or clarify the terminal metaphor (→~/hargile) for non-technical readers.	

▲ Section Integrity

 70%

Overall sections are present and logically ordered (headline, problem, approach, audience, proof, CTA, privacy). However several blocks mix formats and ideas: the terminal-style block ("methode.md" / →~/hargilecat methode.md) mixes meta content and process steps without clear heading hierarchy, and CTAs are repeated in different places without a distinct 'How to get started' section. Also the problem paragraph contains run-together text ("UnprospectdemandeàChatGPT...") which breaks scanning. Recommend: split the terminal block into explicit subheadings (Onboarding / Optimisation / Suivi mensuel), create a single clear CTA section, and fix formatting errors.

▲ Specificity

 40%

Content lacks concrete metrics, timelines, technical deliverables and examples. Missing: sample audit outputs, expected improvements (CTR, mentions), frequency of reports, pricing or time-to-value. For credibility add numbers and examples: "Audit gratuit: 1 URL analysée, X IA sources consultées, rapport PDF en 48h"; or show a before/after snippet where a competitor is cited and client was absent.

▲ Clarity and Assertiveness

 65%

Many lines are clear and direct ("Onmesure.Onoptimise.Onprouve.") which reads assertive but the punctuation/spacing errors undercut authority. Some phrasing is hedged or vague about outcomes—e.g., no concrete claim on impact or timelines. Suggest stronger, quantified claims where possible: "Nous identifions X requêtes par mois où vous n'apparaissez pas; nous publions Y pages optimisées en Z semaines." Also fix spacing and punctuation to restore confidence.

▲ Illustration Opportunities

 80%

Several concrete visuals would increase comprehension: 1) Process flowchart placed next to 'Notre approche' showing Onboarding → Optimisation → Suivi mensuel with deliverables and cadence; 2) Screenshot example under 'Commencez par la preuve' showing an audit sample (list of queries where competitors appear); 3) Comparison table in 'Pour qui' mapping industry to typical search queries and expected outputs; 4) Diagram of 'How AIs surface answers' showing sources (site content, structured data, citations) so readers see why being indexed by AIs matters.

▲ External Link Suggestions

 50%

The page contains no external references. Suggested authoritative links to add for credibility: 1) 'Why structured data matters' — Schema.org documentation (anchor: "données structurées (Schema.org)") → <https://schema.org/>; 2) 'Search & AI guidance' — Google Search Central article on 'how search engines use structured data' or 'AI in search' (anchor: "bonnes pratiques SEO pour l'IA") → <https://developers.google.com/search/>; 3) 'AI and search behavior' — an OpenAI or academic overview on retrieval/LLMs (anchor: "comment les IA utilisent le web") → <https://openai.com/research> or a relevant Wikipedia article such as <https://en.wikipedia.org/wiki/ChatGPT>. These improve authority and help readers understand technical claims.

▲ Tone and Language Check

 70%

Tone is generally professional and persuasive, with effective short slogans ("Onmesure.Onoptimise.Onprouve."). Problems: formatting errors (missing spaces) reduce perceived professionalism and the terminal metaphor may confuse non-technical visitors. Recommend consistent formal register, correct spacing, and replace slangy metaphors with clear statements (e.g., instead of "Pas de boîte noire" use "Processus transparent"), keeping the confident messaging but fixing typos.

Summary Block	30%
There is no dedicated 'Key takeaways' or executive summary block. Add a short summary under the main header (3 bullets): 1) problem in one line, 2) what the audit delivers, 3) immediate next step (request audit). Place it directly under the lead CTA to improve conversions.	
Readability	65%
The page is readable but not organized as Q&A. Key buyer questions are implied ("Pourquoi le GEO?", "Comment ça marche?", "Quel résultat attendre?") but not answered directly. Converting some parts into explicit Q&A (e.g., "Que mesure l'audit?", "Combien de temps faut-il?") would make decisions faster for visitors. Example: add a short FAQ under the CTA that answers top 4 visitor questions.	
Modular Content Enhancements	70%
Content maps well to modular blocks that would improve reuse: 1) 'How it works' step list (Onboarding / Optimisation / Suivi mensuel) as a standalone module; 2) an FAQ module answering common client concerns; 3) Industry-specific 'Use case' cards (Avocats, Notaires, Comptables, etc.); 4) a 'Proof / Results' module with anonymized examples; 5) a one-field 'Free audit' lead-capture widget. The current copy partially supports these but is not separated into exportable modules.	
Paragraph Cohesion	60%
Short sections and bullets aid scanning, but several paragraphs are fragmented or conflate ideas: e.g., the 'Notre approche' area mixes process philosophy (no black box) with operational steps without transition. The 'Pour qui' list is coherent, but the final CTAs and privacy notice appear with little separation. Recommend grouping content so each paragraph has one purpose: claim, evidence, action.	

Structured data analysis ⓘ

Insights into how effectively your content is structured for AI understanding, indexing, and ranking. Want to learn how these scores are calculated? View the full scoring methodology in our [documentation](#).
